

StartUP NY Potential Competitor Notification -1

This company designs and builds robots. Its first product is a robot to help manufacturers increase their productivity and reduce costs. In a factory, these robots primarily help to move objects around and to help inspect parts as they are moved around. It is starting with 5 pilot manufacturing customers in New York State but will eventually serve the rest of the US, and eventually expand sales internationally. There is high demand for this type of robot, as all existing robots for manufacturers are very expensive, difficult to program, and immobile. This company's robot solves all of these problems .

NAICS code 541715

The company expects to locate in a StartUP NY designated area at Stony Brook University.

Campus Contact: Lisa Chichura

Associate Director, SPIR

114 NYS Center of Excellence in Wireless and Information Technology
