

StartUP NY Potential Competitor Notification -2

The core of the company's technology is high accuracy timing measurement devices, time references, time synchronization protocols and algorithms. Its strength is innovation. All of its products are based on issued patents, patents pending or trade secrets. Their solutions provide more accurate and lower cost solutions than competition for several applications including high energy and nuclear physics, cellular networks, military and civil radars and positioning, medical equipment, financial industry and network security. Another major advantage is the deployment over commercial networks and implementation in software algorithms of functions that traditionally require expensive hardware.

NAICS 541712, 541330

The company expects to locate in a StartUP NY designated area at Stony Brook University.

Campus Contact: Lisa Chichura

Associate Director, SPIR

114 NYS Center of Excellence in Wireless and Information Technology
